KAPPASOAP R 41
Soaping agent

CHEMICAL-PHYSICAL DATA
Chemical composition: preparation of polyacrylates and alkylphosphonates
Appearance: yellowish, nearly clear solution
pH-value 20 °C (product): 4 - 5
Density 20 °C (g/ml): approx. 1.16
Ionic charge: anionic

FUNCTION
KAPPASOAP R 41 is an excellent soaping agent. The product has an excellent dispersing effect and is an efficient sequestering agent for alkaline earth and heavy metal ions. At pH 11 and 60 °C, 1 g of KAPPASOAP R 41 binds approx. 90 mg of CaO or approx. 161 mg of CaCO₃. The formed complexes are very stable even at boiling temperature and in a stronger alkaline range (to approx. 3 g/l NaOH 100 %).
KAPPASOAP R 41 does not cause any demetallization of direct and reactive dyes based on metallic complexes in spite of its strongly developed chelating capacity.
KAPPASOAP R 41 is not interfacial-active and therefore foam-free.

APPLICATION
KAPPASOAP R 41 is a very universally applicable product, e. g.
- for dyeing of cellulosic fibres or cellulosic fibre blends with direct, reactive, vat and sulfur dyes, whereas it is possible to dye raw cotton without preliminary cleaning for example.
- for printing with reactive dyes when applying alginate thickening agents.
- for all scouring, washing and soaping processes in neutral and alkaline range.
The application level depends on the respective operating conditions. Recommended application level for long liquors:

| Approx. 0.1 ml/l KAPPASOAP R 41 |

Relating to the sequestering of water hardness, approx. 0.1 ml KAPPASOAP R 41 is required per 1 °dH and 1 litre of water.

DILUTION INSTRUCTION
KAPPASOAP R 41 can be diluted with cold water at any ratio, but can also be added directly to the liquor.

STORAGE
KAPPASOAP R 41 remains stable for at least 1 year if stored properly and cool in a tightly closed container.
